INTRODUCTION

OUR STORY

The origin of Redd Point & Redd Link

Solving Padel's biggest debate...
Redd Point was born from one of padel's most presistent challenges: deciding whether a ball is IN or OUT. In a sport defined by speed, angles, and precision, unclear line calls have long disrupted the flow of play, sparked disputes and changed match outcomes.

Determined to eliminate that uncertainty, Redd Point set out to revolutionise the game with a single goal: bring absolute clarity to every point.

After 4 years of dedicated research, development and thesting, the result was a breakthrough: the world's first patented line technology for padel.

Engineerd for superior visibility, acuracy and durability, Redd point removes doubt from every court - making the game more fair, faster and professional.

While Redd Point focuses on improving line visibility on padel courts worldwide, we've launched a second company called Redd Link, a dedicated innovation studio within the REDD family, fully focused on developing an advanced system for the professional padel circuit - *Including Premier padel and FIP.* The project centers on cutting-edge technology, realtime data and professional-grade support for referees, players and tournaments at the highest level.

Two companies... One mission:
make padel smart, fair and future ready.

We make sure every bal counts.

"Wherever there is uncertainty, there is opportunity" (Marc Cuban)

Redd Point & Redd Link innovate padel like never before. With a patented line technology we are building on the further professionalization of the sport on a sustainable and qualitative basis

indispensable UPGRADE
Did the ball hit the glass or the ground first?

Our unique and patented system was developed to eliminate this common discussion. Consisting of quality and matched components, the solution ensures correct assessment of any questionable corner ball.

REDD POINT Line detection

Whether you're running a boutique facility or a multi-court center, Redd Point gives you a distinct competitive edge. Clubs that install our system not only stand out - they fill up.

- 100% line clarity - Eliminates disputes and enhances match fairness.
- Faster gameplay - Reduces delays caused by IN/OUT arguments or VAR reviews.
- Attracts more players - Competitive and recreational players alike prefer courts with professional level features.
- Boosts club credibility - Align your facility with the technology used in high-level tournaments
- Increases retention & bookings - Players come back to clubs that offer clear and consistent gameplay.

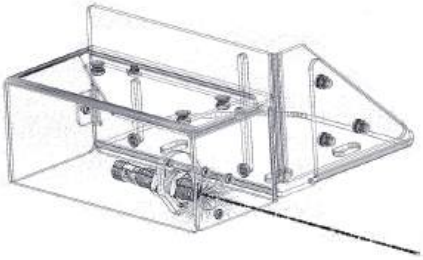
STAND OUT

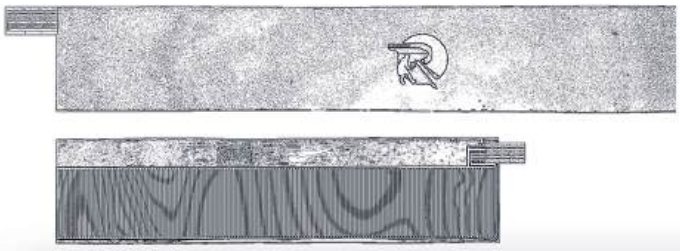
MK1.5

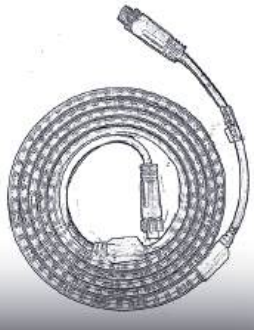
The Redd Point MK1.5 is an advanced system designed with precision and reliability in mind. It combines 10 pressure zones on the glass with a through-beam laser transmitter and receiver to ensure accurate detection. The core of the system is a controller box equipped with a motherboard, a transformer, and proprietary software developed in-house for optimal performance. All sensors connect via a single multicable, making installation straightforward and efficient. A key feature of the system is the custom-designed LED strip, which indicates whether the ball is IN or OUT.

Engineered for maximum visibility —even in bright sunlight—the LED's are housed in a durable aluminum casing and mounted on the top exterior of the back glass walls for clear, consistent signaling.

The Redd Point MK1.5 sets a new standard for durability, and ease of use in padel technology.







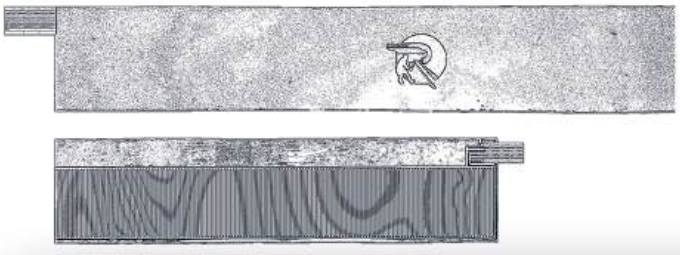
SYSTEM LINE-UP

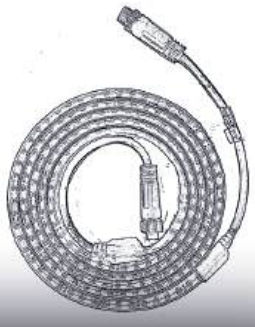
MK2 Lite

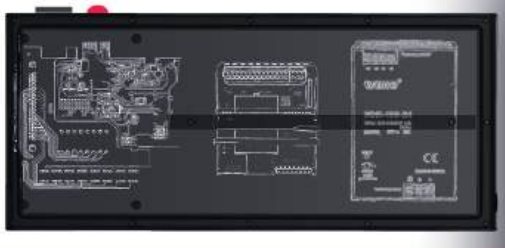
The MK2 Lite replaces the laser detection components (MK1.5) with pressure zones. The base configuration includes 10 pressure zones on the glass and 10 beneath the carpet, providing 100% accuracy in detecting every ball impact.

The MK2 Lite is powered by the same controller box as the MK1.5, with specially developed software capable of processing all detections. The setup with glass and carpet pressure zones provides even more certainty, guaranteeing correct calls when close balls land near the corner of the back glass wall.

The MK2 Lite combines accuracy and reliability with a simplified setup making it the ideal choice for partners and customers who want advanced ball detection with straightforward installation.







SYSTEM LINE-UP

MK2 Pro

We are proud to present the MK2 Pro, the high-end version of our MK2 series, specifically designed for the professional circuit. Only 1 controller box is needed for a complete court. The MK2 Pro is built exclusively with premium components, ensuring maximum reliability and durability, even under the most demanding conditions. The MK2 Pro includes full coverage of both back walls and has the possibility to include the side walls optionally. This guarantees total precision and confidence in every decision. The MK2 Pro integrates a global monitoring platform, allowing software updates and system upgrades to be performed remotely. This ensures courts are always up to date and optimally supported, wherever in the world they are installed.

With the MK2 Pro, we provide the most advanced and professional-grade ball detection system available, tailored to meet the highest standards of international competition.
